

# TEA BEYOND

*The World Beyond Tea*

## Brewing Instructions

---

**Water:** Spring or purified water is highly recommended. Water temperature should be 212° F (100° c).

**Tea-ware:** For best presentation and taste, we recommend using our SmarTea pot.

**Instruction:** Boil water until it reaches 212° F (100°c) and pour the water into teapot. Then drop one blooming tea into the water. Wait until it fully blooms.

**Water Refill (multiple infusions):** When pouring tea into tea cup, make sure to keep 50% of the water in tea pot each time. When refilling water, gently add boiling water along the glass wall to tea pot, circling from left to right or from right to left; Or lean the tea pot to 70 degree angle then add water gently along the glass wall. Avoid any directly pouring boiling water on flowers.

## Home Décor

---

Start a happy day with a tea blooming in the vase! It's as simple as 1-2-3 steps:

1. Warm the glass vase\* gradually until the whole vase gets hot evenly. This prevents the vase breaking when you pour the hot water in.
2. Pour the boiling water into vase then drop a blooming tea you love until bloom
3. Let the tea sit for a while until the vase become warm. Slowly replace the hot tea with fresh cold water in until the water is clear: this helps enhance the blooming tea display. Normally, blooming tea can stay fresh for about 4-6 days if you carefully change the water every day. You can also make a perfect blooming tea decor by using the blooming tea after you finish the drink (when you take the blooming tea out from teapot to vase, use food tong to gently hold the bottom of blooming tea, avoiding to touch the flower part)

\* For best presentation, the size of vase should be close to the size of tea pot you use.
